Placement Rate Methodology

The Oklahoma State Department of Career and Technology Education requires the institution to report the student's job placement rate for twelve months following the end of the school year in which the students completed their program. The placemet rate includes the percentatge of completers who have found employment in a profession related to the completer's program or career cluster. It also includes program completers who are continuing their education at another institution or have entered the military. It does not include program completers employed in a job not related to the program or career cluster.
